WORK EXPERIENCE

EMPLOYER	Healthcast US Inc	Covington, Kentucky
JOB TITLE	Contract Developer - Angular.js	12/16 - 05/17

- **health-cast.com - on going**: Collaborated with the team in designing and developing the health-cast.com website from the ground up. Refactored a significant portion of the foundational code.
- Introduced component based architecture to the system, enabling seamless feature addition/modification.
- Integrated Firebase authentication system with third parties like Google and Facebook in the health survey web app. Collaborated on the design of the web and mobile app and made iterative improvements.
- Worked directly with CEO, senior engineers, & data scientists in a team environment in office & remotely.

EMPLOYER	Gaslight - The Kroger Company	Cincinnati, Ohio
JOB TITLE	Contract Developer - React.js	05/16 - 11/16

- **Kroger.com - on going**: Collaborated with the team in designing and developing interactive web components in ReactJS with a functional approach using Redux to manage its data.
- Integrated Apollo Client & Graphql to facilitate calls to the RESTful API written in Java & Spring Boot.
- Implemented the client preferred maps API to enable the Kroger store locator feature, where a user can search for a store and is able to see a pin of that store on the user's preferred maps app.

EMPLOYER	Littlelines	Dayton, Ohio
JOB TITLE	Jr. Developer - Ruby on Rails	10/15 - 04/16

- **Escrip-safe.com - on going**: Contributed to upgrading from Rails 3 to Rails 4. Bug fixes.
- **Berggruen.org - mid phase**: Implemented features in the admin panel back-end and contributed to other features, resources as well as models and controllers. Performed routine debugging.
- **Rentaweek.com - end phase**: Supported the admin panel as well as the front-end by working on tying up loose ends on the app. Bug fixes and refactoring, simplifying existing and removing unused code.

EMPLOYER	Differential Dev Shop	Cincinnati, Ohio
JOB TITLE	Jr. Developer - Meteor.js	06/15 - 08/15

- **Dynavisioninternational.com - start phase**: Laid the foundation for the web platform that manages the data for an interface the client utilizes to evaluate and train patients. The interface functions via a Raspberry Pi and records and relays data back to the cloud where the web platform can retrieve data from.
- Worked with project managers, designers and other developers in a team environment. Worked both collaboratively and independently to identify problems and to formulate creative solutions.
